

# GIRAUD YACHT SERVICES

Dear Captains, dear Chief-engineers,

*Our suggestion to Clients is to use:*

**Gamazyme BTC** as the regular toilet cleaner used by the stewardesses, and **Gamazyme DPC** on a weekly basis in the sinks and showers by the stewardesses and the chefs.

If you have pipes you feel are significantly blocked then a treatment with **Gamazyme Digestor** should significantly reduce the organic build up.

**Gamazyme 700FN**

is really only for restarting a black water system that has stopped, been killed off or has been shut down.

**Gamazyme BOE** - Biological odour eliminator

Both quick and long term elimination of unpleasant odours

**Gamazyme BTC** - Biological toilet cleaner

Cleans the toilet and doses the drains with organic waste eating bacteria. Use as a normal toilet cleaner

**Gamazyme TDS** - Gamazyme toilet descaler

Dissolves uric acid, organic material and scale. To be used regularly.

**Gamazyme MSC** - Multi surface cleaner

A general purpose cleaning product.

**Gamazyme DPC** - Biological drain/pipe cleaner

For use as a maintenance product in all pipes and holding tanks and to clear blocked pipes.

**Gamazyme Digestor** - Drain and pulper cleaner

To be used where there are high volumes of organic waste and grease, i.e. incinerators etc.

**Gamazyme 700FN** - Biological booster for sewage

Used to kick start black water sewage systems

**Gamazyme FC** - Biological floor cleaner

In depth floor cleaner for galley areas

**Gamazyme BUB** - Biological urine blocks

For removing uric acid and scale from urinals (not many urinals on superyachts however)
